Comprehensive approaches to suicide prevention on college campuses require a fundamental shift in the paradigm for conceptualizing suicidality, toward new ways of thinking about collective responsibility. The concept of connectedness offers a useful framework for conceptualizing risk and resilience processes as well as a roadmap for action. The following paper proffers a definition of connectedness and four core components of a connectedness framework. It closes with intervention implications for suicide prevention on college campuses.

Contents include:

- Case examples – What connectedness is and is not
- Core components of a connectedness framework
- Empirical evidence for relevance of connectedness to well-being
- Connectedness, Perceived Norms and Suicide

Populations: Young Adults Ages 18 to 25 Years
Settings: Colleges and Universities
About Suicide: Risk and Protective Factors

Suicide Prevention Resource Center

Strategies: Connectedness
